

# CS 321: Introduction to HCI

Methods for Design, Prototyping and Evaluating User Interaction

**Lecture 014:**  
Task Scenarios

Eren Gultepe  
SIUE

## Group Activity (25 min)

Starting forming the tasks that you want to support for your project.

For **2E** you will need to deliver **6** different tasks at varying levels of difficulty.

Again, we are not concerned with the actual implementation of the design yet. Only the tasks that it may support.

# Group Activity (25 min)

Partner with a group and get their feedback regarding your tasks (vice versa)

- Some things to watch out for are:
  - Context of scenarios
  - Believable, not too contrived
  - Range of difficulties
  - Makes it clear what the problem is
  - No solutions are proposed
