

CS 321: Introduction to HCI

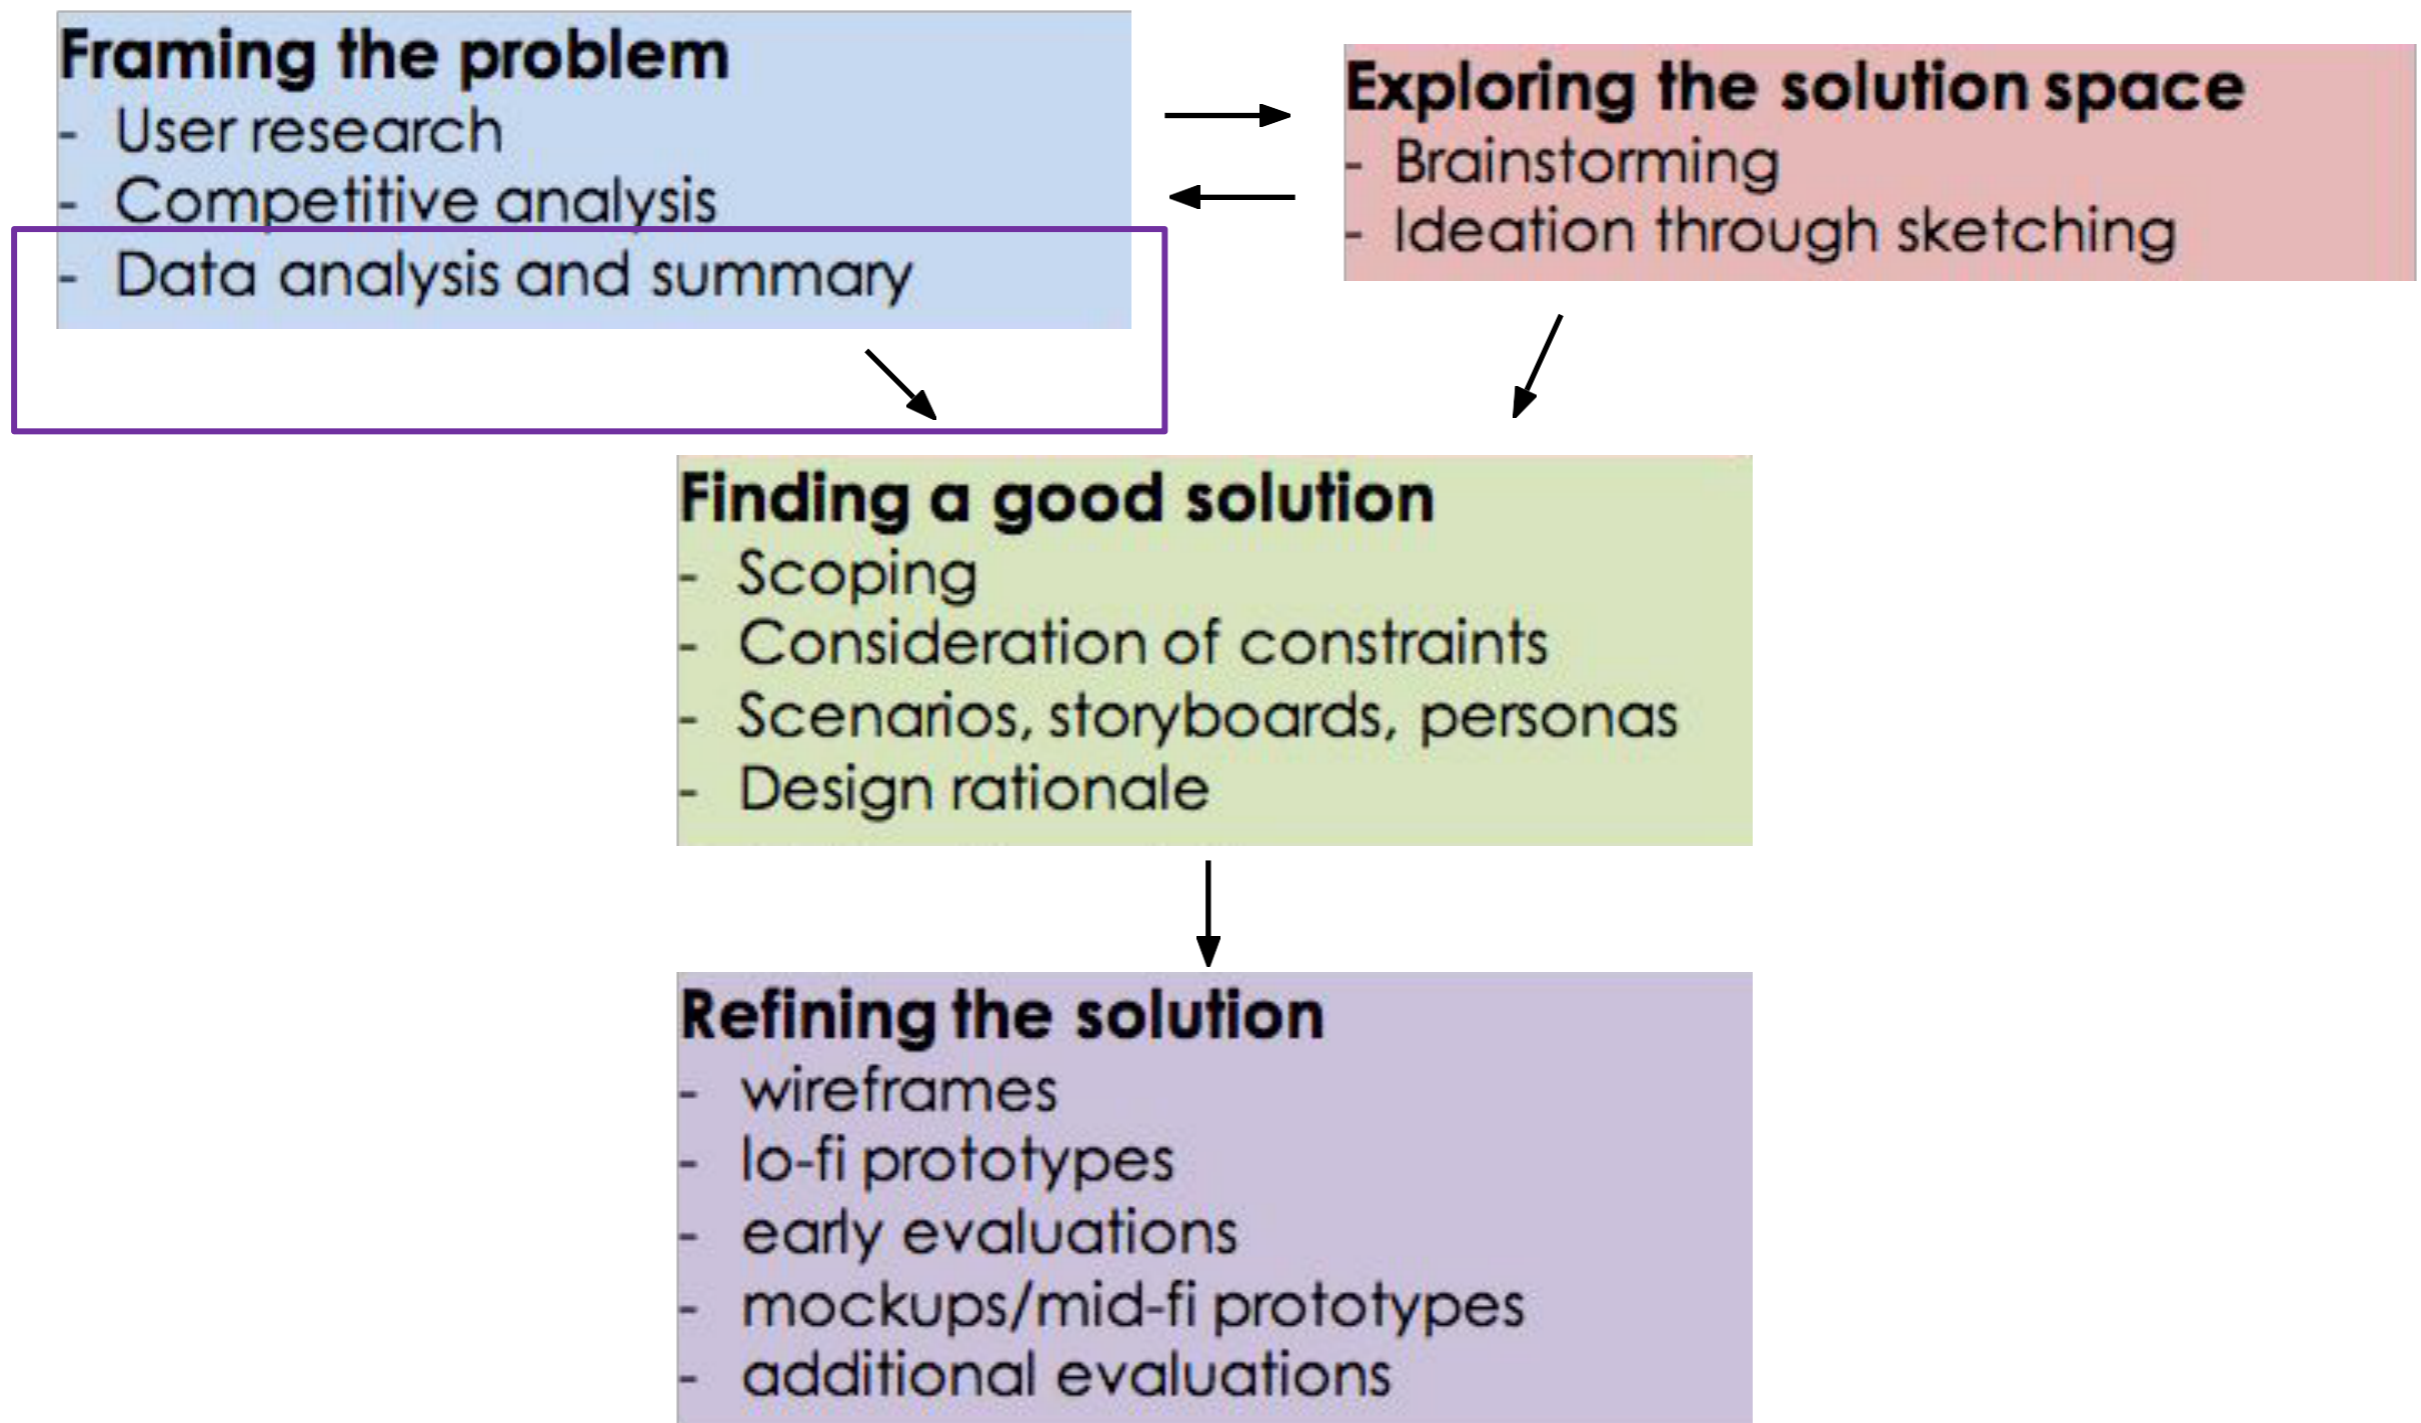

Methods for Design, Prototyping and Evaluating User Interaction

Lecture 11:
Personas & Task Analysis

Eren Gultepe

Project Status

Personas

“When you are designing for everyone,
you are not designing for anyone.”

Personas

Confident learner

Samantha Bell

“I’d love to keep in contact with my friends”

Sam is about to go abroad for her gap year, so her parents decided to get her a new camera, to make sure she’s able to record everything she gets up to.

She likes the camera as it looks so modern, and it’s able to do so much more than a lot of her friends’ cameras.

She loves being in contact with people all the time, and finds it’s a great way to kill time like when waiting for the bus. She uses a lot of the more advanced features – panoramic shots, online upload and .

When she encounters a problem she ignores it most of the time - she’s not sure if she even got a manual with the camera. When she has trouble she can’t ignore she speaks to her friends, or goes into a camera store – she wants to be talked through the problem.

First time user

Female, 27 year old, single
Student

Sam prefers to learn how to things by trying things out by herself. She isn’t worried about ‘breaking’ anything. If she does need help she would prefer to not to refer to a manual but “do it herself”.

Needs

In order of preference:

1. To share pictures with her parents
2. To share her pictures with her friends
3. To share her pictures with people she meets whilst travelling

Ideal features

- Ability to take pictures
- Ability to upload images to personal site using 3G/Wifi
- Allowing others to access her pictures remotely
- Long battery life
- Ability to name and add comments to uploaded images
- Ability to create several albums, and upload pictures to each

Frustrations

- Lack of wireless/3G access
- Slow uploads
- Low battery life
- Need to be plugged in to upload images
- Slow shutter speed
- Want to be able to name/add comments to uploaded images
- Getting online is confusing
- Creating new albums

Key attributes

Personas

Christina
Moletti
Freelance Graphic Designer

"Living life is a creative process too"

- Has enough money but not much more
- Works hard during the day but on her own hours
- Walking is her main way to travel, day or night

Personal Information

Age: 25
Location: Pittsburgh, PA
Education: BA Graphic Design NC State University,
Profession: Freelance Graphic Designer, Part-Time Student
Home life: Lives with a roommate (Eva 25),
Hobbies: Playing guitar and xylophone, reading, drawing, sewing, watching movies, sleeping
Favorite TV shows: Doesn't watch much TV
Personality: Easygoing, outgoing, try new things

User Goals

Christina uses this information system to...

- Give her reasons to go out walking at night
- To be active and aware of her surroundings at night
- To find the safest places to go at night
- Make walking and being out at night more social with her friends

Personas (and stories...) fight back cognitive laziness (i.e., generalizing, taking the easy way out)...

Who are we really designing for?

Benefits of Personas

Designing for the most relevant stakeholders

Easier to Empathize

- Concreteness

- Recognition

- Evocativeness

Communication among team members and with customers

Personas

<p>Christina Moletti <i>Freelance Graphic Designer</i></p> 	<p>Maria Nantes <i>Newspaper Editor</i></p> 	<p>James Goettsner <i>Senior Engineer</i></p> 
<p>"Living life is a creative process too"</p> <ul style="list-style-type: none">- Has enough money but not much more- Works hard during the day but on her own hours- Walking is her main way to travel, day or night	<p>"I want to stay healthy both mentally and physically always"</p> <ul style="list-style-type: none">- Health Conscious- Use basic technology for day to day activities- Enjoy Social groups	<p>"I know what I'm doing, I'm willing to try everything new."</p> <ul style="list-style-type: none">- is willing to spend money on that- Likes to chat with others online- Knows that health is very important & work out
<p>Personal Information</p> <p>Age: 25 Location: Pittsburgh, PA Education: BA Graphic Design NC State University, Profession: Freelance Graphic Designer, Part-Time Student Home life: Lives with a roommate (Eva 25), Hobbies: Playing guitar and xylophone, reading, drawing, sewing, watching movies, sleeping Favorite TV shows: Doesn't watch much TV Personality: Easygoing, outgoing, try new things</p>	<p>Personal Information</p> <p>Age: 31 Location: Ann Arbor, MI Education: Master's in English from U of Michigan Profession: Newspaper Editor Home life: Married, no children Hobbies: Walking, making friends, Yoga Favorite TV shows: Desperate Housewives Personality: Outgoing, Passionate, Social, Cheerful, Sophisticated</p>	<p>Personal Information</p> <p>Age: 37 Location: San Fransisco, CA Profession: Cellphone Interface Developing Education: Master's Home life: Single Hobbies: Surfing online to look for new electronic products, working out at gym Favorite TV shows: Friends, Heros Personality: knowledgeable in popular stuffs, talkative, keeping things on schedule</p>
<p>User Goals</p> <p><i>Christina uses this information system to...</i></p> <ul style="list-style-type: none">- Give her reasons to go out walking at night- To be active and aware of her surroundings at night- To find the safest places to go at night- Make walking and being out at night more social with her friends	<p>User Goals</p> <p><i>Maria uses this information system to...</i></p> <ul style="list-style-type: none">- Connect and coordinate with friends- Find safe walking routes at night- Get a sense of safety by getting more info- Find out about social events taking place at night, which might be of potential interest- Wants to get emotional and mental relaxation by walking	<p>User Goals</p> <p><i>James uses this information system to...</i></p> <ul style="list-style-type: none">- Stay ahead of latest trends on mobile devices- Take more time to walk as the substitute for exercise- Meet new friends through this application- Feel free to walk at night- Discuss the new interaction- Try to figure out a method for socializing and also provide a feeling of security

Personas - Gender

Abby Jones¹

You can edit anything in blue print

- 28 years old
- Employed as an Accountant
- Lives in Cardiff, Wales

Abby has always liked music. When she is on her way to work in the morning, she listens to music that spans a wide variety of styles. But when she arrives at work, she turns it off, and begins her day by scanning all her emails first to get an overall picture before answering any of them. (This extra pass takes time but seems worth it.) Some nights she exercises or stretches, and sometimes she likes to play computer puzzle games like Sudoku

Background and skills

Abby works as an accountant. She is comfortable with the technologies she uses regularly, but she just moved to this employer 1 week ago, and their software systems are new to her.

Abby says she's a "numbers person", but she has never taken any computer programming or IT systems classes. She likes Math and knows how to think with numbers. She writes and edits spreadsheet formulas in her work.

In her free time, she also enjoys working with numbers and logic. She especially likes working out puzzles and puzzle games, either on paper or on the computer

Motivations and Attitudes

- **Motivations:** Abby uses technologies to accomplish her tasks. She learns new technologies if and when she needs to, but prefers to use methods she is already familiar and comfortable with, to keep her focus on the tasks she cares about.
- **Computer Self-Efficacy:** Abby has low confidence about doing unfamiliar computing tasks. If problems arise with her technology, she often blames herself for these problems. This affects whether and how she will persevere with a task if technology problems have arisen.
- **Attitude toward Risk:** Abby's life is a little complicated and she rarely has spare time. So she is risk averse about using unfamiliar technologies that might need her to spend extra time on them, even if the new features might be relevant. She instead performs tasks using familiar features, because they're more predictable about what she will get from them and how much time they will take.

How Abby Works with Information and Learns:

- **Information Processing Style:** Abby tends towards a *comprehensive information processing style* when she needs to more information. So, instead of acting upon the first option that seems promising, she gathers information comprehensively to try to form a complete understanding of the problem before trying to solve it. Thus, her style is "burst-y"; first she reads a lot, then she acts on it in a batch of activity.
- **Learning: by Process vs. by Tinkering:** When learning new technology, Abby leans toward process-oriented learning, e.g., tutorials, step-by-step processes, wizards, online how-to videos, etc. She doesn't particularly like learning by tinkering with software (i.e., just trying out new features or commands to see what they do), but when she does tinker, it has positive effects on her understanding of the software.

¹Abby represents users with motivations/attitudes and information/learning styles similar to hers. For data on females and males similar to and different from Abby, see <http://eusesconsortium.org/gender/gender.php>

Personas - Culture

Australia

	demand for justification of inequalities and strive after equal distribution of power	Society	hierarchical order is accepted, people have a place without the need for justification	
	individuals act as members of a group whose needs precede individual needs	Individualism	individuals take care of personal achievements and needs of immediate families	
	preference for cooperation, modesty, caring for the weak, relations, and quality of life	Motivation	preference for achievement, heroism, competition and material rewards for success	
	comfortable in unstructured situations, fewer rules, tend to be more pragmatic	Ambiguity	unknown situations and unorthodox ideas are avoided by rules, laws, and regulations	
	short-term: preference for time-honoured traditions, steadiness, social obligations	Foresight	long-term: encourage efforts in modern education as a way to prepare for the future	
	preference for logic, facts, directness; communication is clear, concise, and efficient	Communication	emphasis on interpersonal relationships; words are not as important as context	
	organized around a calendar, high value on punctuality, planning, staying on schedule	Time	many things going on at once, tolerant to interruptions plans and commitments are flexible	

identification and affiliation to social group

"Every Australian I have talked to said the Victoria Bitter is kind of the student beer"

"In Australia if you are a CEO you wear a suit and you have this type of style, not what you want to wear"

"People here talk a lot about food and at which restaurant they went for dinner"

themed, unique features and trendy design

"It is aesthetically appealing if you cover everything up by a fancy facade"

"This was one of the things you expected it to be like that: people have this I would say surfer-style"

"On Melbourne Cup Day they dress as Victorian Royals and wear a hat, it is themed"

Australia is a rather remote area

"The sun is so strong, they even give away free sunscreen in some open-air bars"

"There are a lot of Australian made products, such as Macadamia, Mangos, or also Didgeridoos"

"I experience Australia as a beach-lifestyle country with bad internet providers"

people depend on regulations and simplicity

"Australians really believe in the complete safety of their bicycle helmets"

"Every traffic light has an additional audio signal so pedestrians always know when they can cross"

"Beer bottles are very easy to open, you can just unscrew the crown caps"

people have a laid-back attitude

"I have the feeling that Australians are less emotionally reserved"

"Australians get annoyed when buses break down but they don't stress to fix it immediately"

"I don't think I have experienced such hospitality as I do here in other places"

Icons created by Rémy Médard, Roman J. Sokolov, Luis Prado from the Neuron Project

Ella Jones

"I don't like the public transport in Melbourne. Trams often break down and I actually have no clue how the new ticketing system works. But I don't bother anymore."

Ella is a 31 years old researcher at Monash University, Australia. As about 90% of Australians she lives in a city, more precisely in Melbourne, Abbotsford. Abbotsford is a nice neighbourhood only a little away from Melbourne's Central Business District. She would love to live closer to the centre because she likes the trendy designed buildings there but with her current salary and the high living costs she can't afford to live in the centre at the moment.

Ella was born and raised in Melbourne and she never left Australia except for traveling. She studied in Sydney but came back to Melbourne because she appreciates the lesser high-rise architecture. Her parents also retire in Melbourne but she lives a lone in a small studio. When she leaves her research department she often goes out to have dinner or drinks with friends in one of the many Asian restaurants close to her department. On the weekends she spends a lot of time in one of Melbourne's parks or at the Beach in St. Kilda.

Ella enjoys living in Melbourne although she is not happy with the public transport system: neither her nor her friends understand the new ticketing system completely. Likewise the Smartphone App, that the 65% smartphone owners in Australia can download for free, is no great support. Consequently she mostly commutes by bike. The fact that she has to wear a helmet by law does not bother her, she feels safer that way and she thinks it relieves her from deciding whether to wear a helmet or not. At work Ella doesn't hesitate to express her emotions. Furthermore she thinks it is important to minimize inequalities among people and that Australian made products should be favoured over imported products.

Jack Anderson

"The more south you go the more busy the people are. But up here everybody is pretty relaxed."

Jack was born as an only child in Cairns, where his parents still live. He is 25 years old and studies Civil Engineering at Queensland University of Technology in Brisbane. With 25 years he is part of Australia's approx. 40% majority of the 25-54 years old age group. He lives in a shared flat with two other Australian students and one exchange student from Germany. Their flat is situated in East Brisbane, a vibrant neighbourhood with a lot of international students and cheap bars.

Jack is responsible for subleasing the forth room regularly to international students as he and his flatmates enjoy meeting new people, although the rarely develop a deep friendship with exchange students. Jack often goes out to have drinks but tries to pay attention not to be in dept. His favourite bar is the Walnut Club. He likes that bar because of the distinctive interior design that gives him a feeling of being in Cuba. On the weekends he joins together with other locals to surf at Pinkenba, close to the centre of Brisbane. During the semester break he likes to travel, in particular to Bali or Fiji, and regularly uses his smartphone to look for travel information. Jack generally likes to use his smartphone to pass time away, as almost 70% of Australian smartphone owners do.

Jack likes to identify himself with the Australian surfer community and usually wears board shorts in his leisure time whereas he disapproves eye-catching status symbols. After his studies he wants to earn a lot of money and would not hesitate to reduce his leisure activities.

Why Personas Fail

They were created, but not used

No buy-in from leadership

Personas were created by UX people and imposed on others

People don't know what personas are or why they're useful

Personas don't work.
We've created them
before and nobody even
used them.

Where did these
personas even come
from?!

Persona Development

What is the main user that you are designing for?

What are their most relevant characteristics?

How are their goals and motivations?

Define User Stories:

“As a [role], I want [feature] because [reason].”

Class activity

Let's develop a **persona** for one of your projects:

What is the main user that you are designing for?

What are their most relevant characteristics?

How are their goals and motivations?

Define at least two User Stories:

“As a [role], I want [feature] because [reason].”

Critique of the persona...

Let's critique the persona:

Are the personas representative of the user population?

Is there an adequate level of detail?

Do you feel like you have a good understanding of the users?

Would it be easy/useful to refer to them while designing?

Task Analysis

Task Analysis

Task Analysis is a lens on the information you obtain through other user research methods

Focus on users' goals and...

... on how do people accomplish a specific task

Helps identify the tasks that your solution must support

Helps to find effective ways of accomplishing a task

Task Analysis Questions

Who is going to use the system?

What tasks do they now perform?

What tasks are desired?

How are the tasks learned?

Where are the tasks performed?

What is the relationship between people & data?

What other tools do people have?

How do people communicate with each other?

How often are the tasks performed?

What are the time constraints on the tasks?

What happens when things go wrong?

Question 1

Who is going to use the system?

Identity

In-house or specific customer is more defined

Broad products need several typical consumers

Background

Skills

Work habits and preferences

Physical characteristics and abilities

Question 2 and 3

What tasks do they now perform?

What tasks are desired?

Important for both automation and new functionality

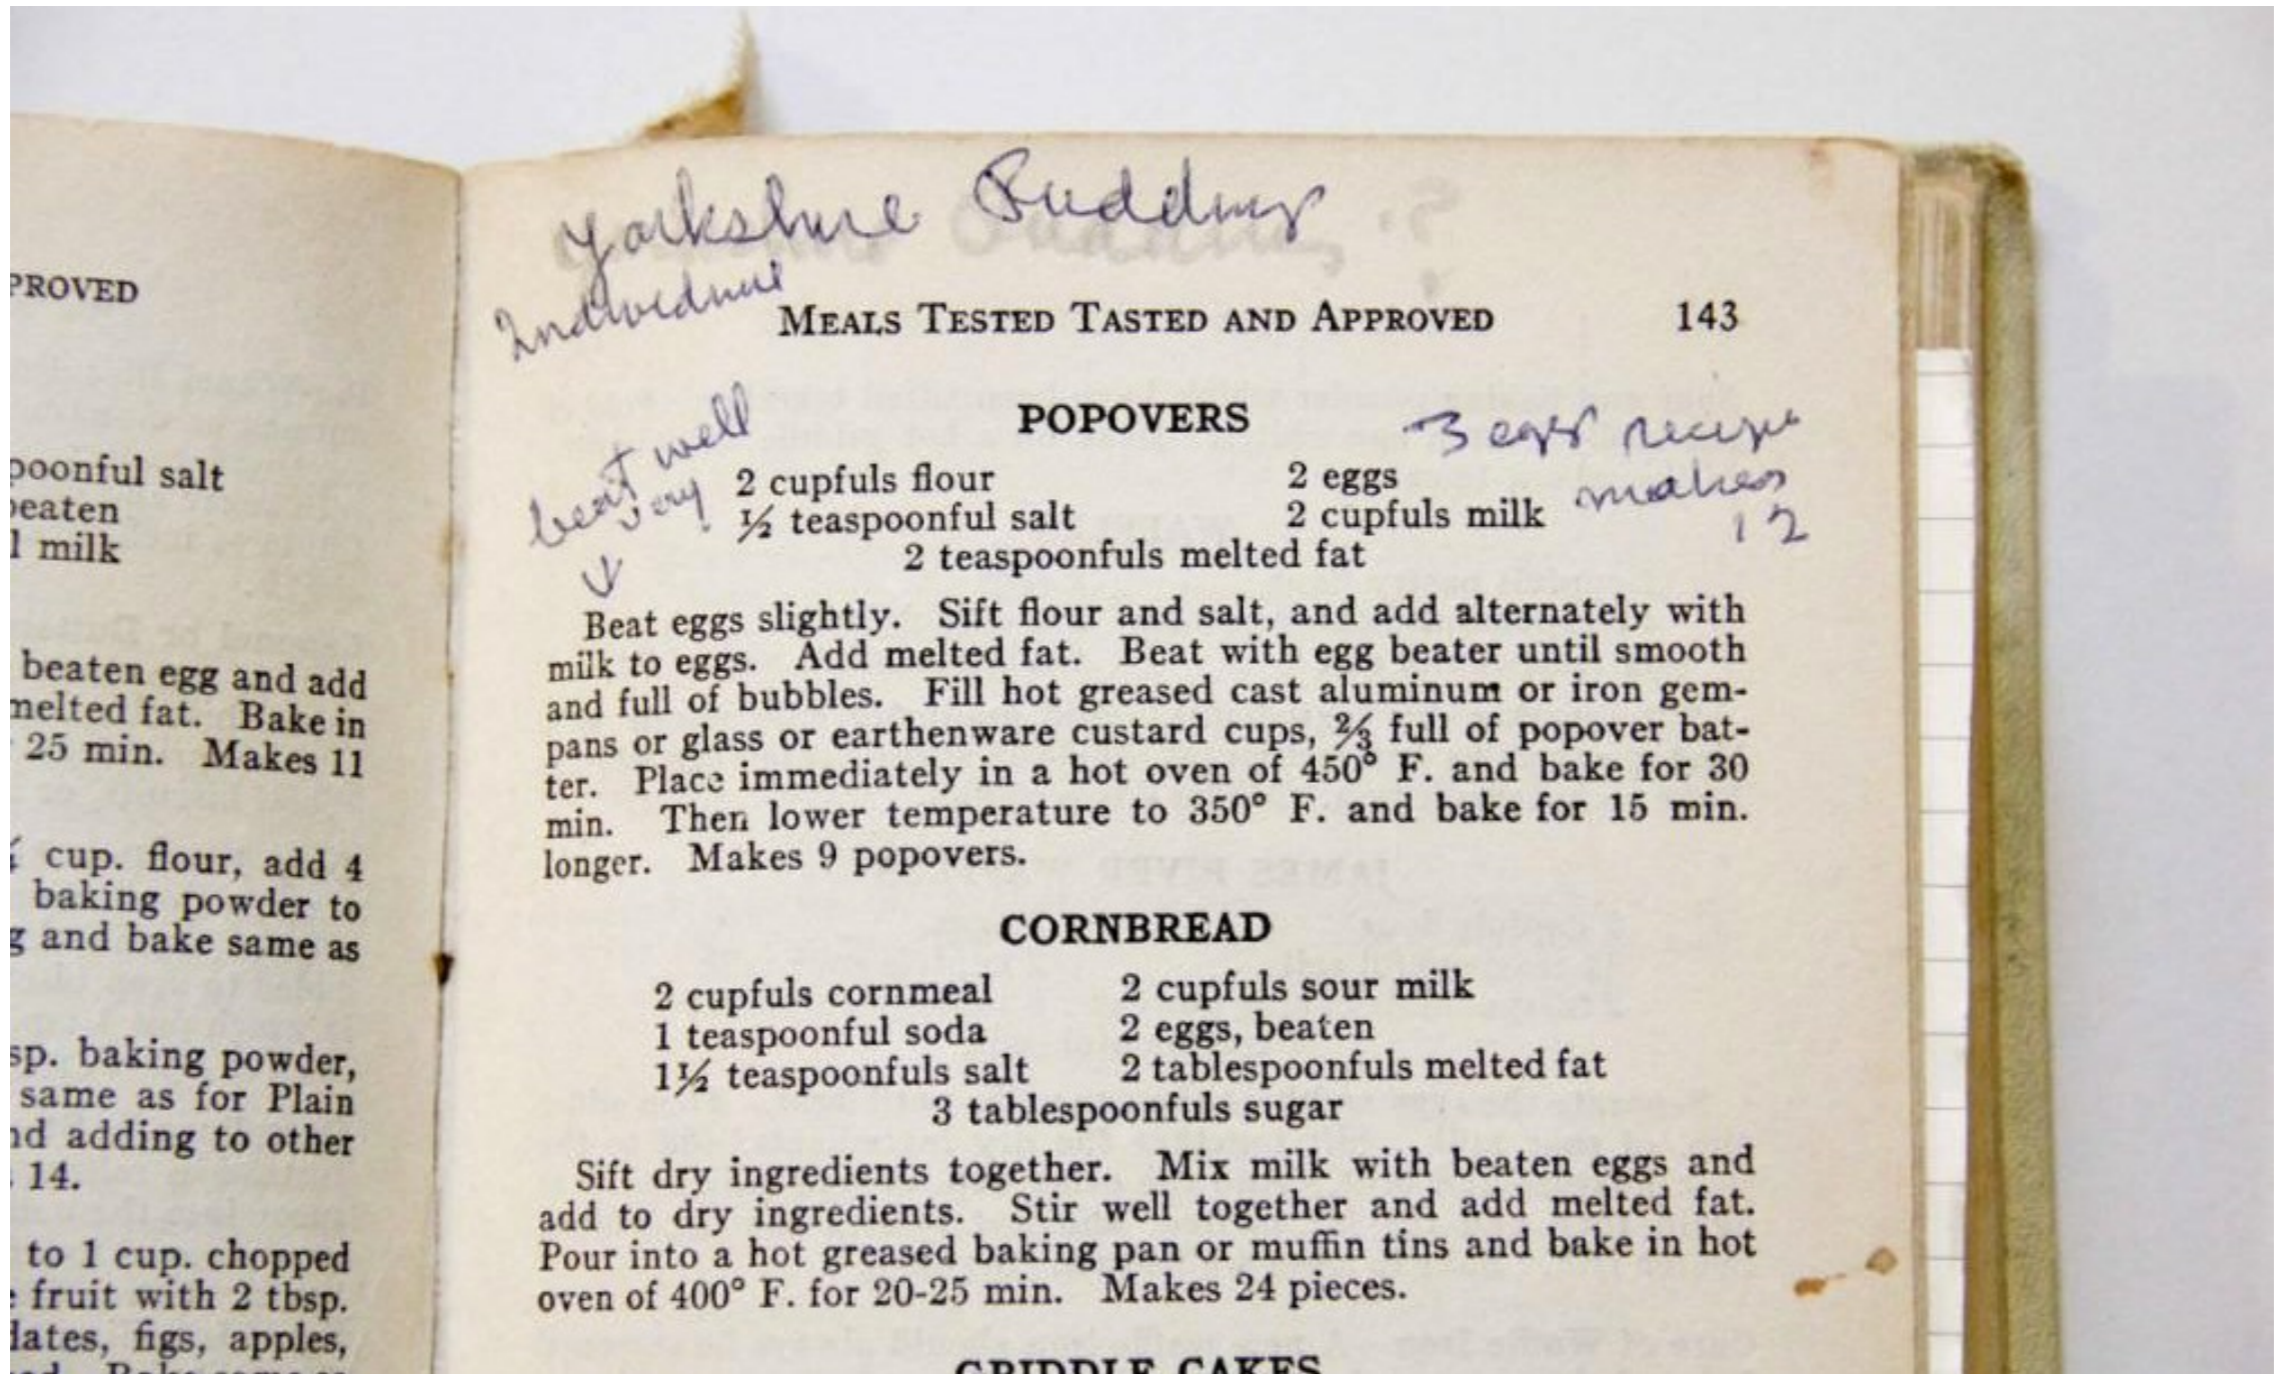

Relative importance of tasks?

Observe people, see it from their perspective

Automated Billing Example

small dentists office had billing automated
assistants were unhappy with new system
old forms contained hand-written margin notes
e.g., patient's insurance takes longer than most

Question 2 and 3

Question 4

How are the tasks learned?

What does a person need to know to perform the task?

Do they need training?

academic

general knowledge / skills

special instruction / training

Question 5

Where are the tasks performed?

Office, laboratory, point of sale?

Effects of environment on customers?

Are people under stress?

Confidentiality required?

Do they have wet, dirty, or slippery hands?

Soft drinks?

Lighting?

Noise?

Question 6

What is the relationship between people & data?

Personal data

Always accessed at same machine?

Do people move between machines?

Common data

Used concurrently?

Passed sequentially between customers?

Remote access required?

Access to data restricted?

Does this relationship change over time?

Question 7

What other tools does a person have?

More than just compatibility

How customer works with collection of tools

Automating lab data collection example:

how is data collected now?

by what instruments and manual procedures?

how is the information analyzed?

are the results transcribed for records or publication?

what media/forms are used and how are they handled?

Question 8

How do people communicate with each other?

Who communicates with whom?

About what?

Follow lines of the organization? Against it?

Question 9

How often are the tasks performed?

Frequent use likely remember more details

Infrequent use may need more help

Even for simple operations,

Make these tasks possible to accomplish

Which function is performed

Most frequently?

By which people?

Optimizing for these will improve perception of performance

Question 10

What are the time constraints on the tasks?

What functions will people be in a hurry for?

Which ones can wait?

Is there a timing relationship between tasks?

Question 11

What happens when things go wrong?

How do people deal with
task-related errors?
practical difficulties?
catastrophes?

Is there a backup strategy?
What are the consequences?

Selecting Tasks

Real tasks people have faced or requested
collect any necessary materials

Should provide reasonable coverage
compare check list of functions to tasks

Mixture of simple and complex tasks
easy tasks (common or introductory)
moderate tasks
difficult tasks (infrequent or for power use)

What can task analysis help with?

Say what **person** wants to do, but not how

allows comparing different design alternatives

identify what tasks can be improved, automated, etc.

Specify **stories** based in concrete facts

say who person is

design can really differ depending on who

give names (allows referring back with more info later)

characteristics of person (e.g., job, expertise)

story forces us to fill in description with relevant details

Describe a complete “**accomplishment**”

forces us to consider how features work together

Types of Task Analysis

Hierarchical Task Analysis

focused on decomposing a high-level task into subtasks

Cognitive Task Analysis

focused on understanding tasks that require:

decision-making

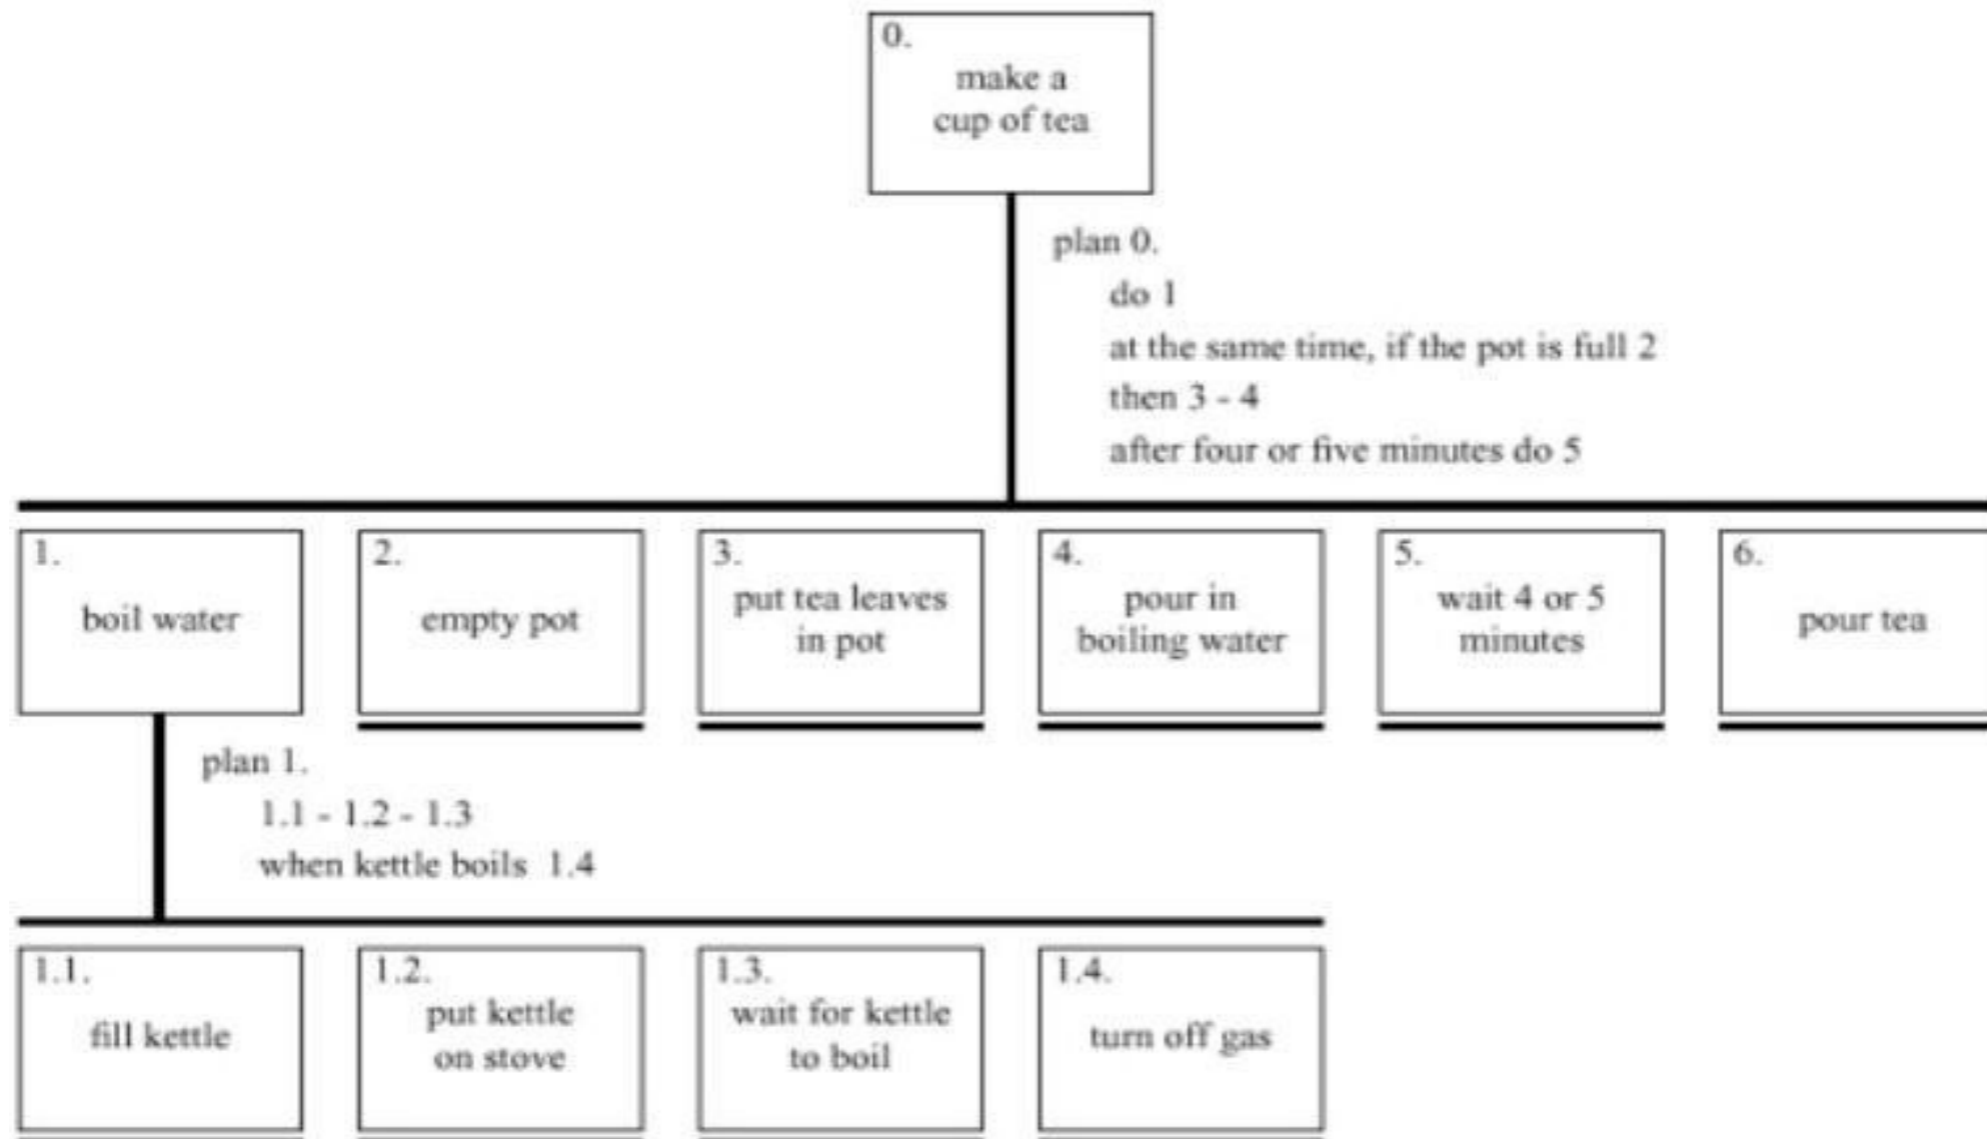

problem-solving

memory

attention

and judgement

Hierarchical Task Analysis:

Using tasks in design

Write up scenarios and storyboards

formally or informally run by people and rest of the design team get more information where needed

Manny is in the city at a restaurant and would like to call his friend Sherry to see when she will be arriving. She called from a friend's house while he was in the bus tunnel, so he missed her call. He would like to check his missed calls and find the number to call her back.

Task: Park in a new neighborhood

Peter is going to brunch on a Sunday with his roommates. He is trying a new place he found on Yelp. He has the address for the place and he is using a smartphone GPS for directions. He leaves the apartment with his roommates at around 8:30am and he wants to beat the crowd so they won't have to wait in line. He is driving a Toyota Corolla that he has owned for five years. It is a rainy day and he doesn't have an umbrella.

Task: Park in a new neighborhood

unknown neighborhood and restaurant facade

Peter is going to brunch on a Sunday with his roommates. He is trying a new place he found on Yelp. He has the address for the place and he is using a smartphone GPS for directions. He leaves the apartment with his roommates at around 8:30am and he wants to beat the crowd so they won't have to wait in line. He is driving a Toyota Corolla that he has owned for five years. It is a rainy day and he doesn't have an umbrella.
